PROFESSIONAL SUMMARY

Results-driven Frontend Developer with 2+ years of experience designing and building scalable single-page applications (SPA) and server-rendered applications using React.js, Next.js, TypeScript, and modern JavaScript (ES6+). Proficient in Redux Toolkit, component-based architecture, RESTful API integration, and performance optimization. Experienced in implementing complex real-world features including authentication systems, role-based access control (RBAC), map integrations, payment gateway workflows (Tap, Ryft), KYC pipelines, and SEO-optimized Next.js applications. Holds intermediate-level backend knowledge across Node.js, Express.js, NestJS, MongoDB, PostgreSQL, and SQL — enabling effective full-stack collaboration and API design discussions. Proven ability to reduce API overhead by 40% and improve frontend performance by 30–35%. Familiar with AI-assisted development tools including GitHub Copilot, Cursor, and Claude. Passionate about delivering seamless user experiences and contributing to high-impact, growth-oriented products.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript (proficient), HTML5, CSS3

Frameworks & Libraries: React.js, Next.js, Redux Toolkit, RTK Query, React Router, Tailwind CSS, NextAuth

Auth & Security: NextAuth, Keycloak, Role-Based Access Control (RBAC), JWT

APIs & Integrations: RESTful APIs, Firebase, Tap Payment, Ryft Payment, Google Maps API

Testing & Quality: Jest, React Testing Library, Chrome DevTools, React Developer Tools

Performance: Code Splitting, Lazy Loading, Memoization, Core Web Vitals (LCP, CLS, FID), SEO

Backend (Intermediate): Node.js, Express.js, NestJS, MongoDB, PostgreSQL, SQL

AI Tools: GitHub Copilot, Cursor, Claude, ChatGPT (AI-assisted development)

Developer Tools: Git, GitHub, VS Code, Agile / Scrum

Concepts: SPA, SSR, REST API Design, Component Architecture, State Management, Responsive Design, Cross-Browser Compatibility

PROFESSIONAL EXPERIENCE

Software Developer | **Wappnet Systems Pvt. Ltd.** | Ahmedabad, India

January 2024 – Present

- Delivered production-grade React.js and Next.js applications supporting multiple business workflows, maintaining consistent cross-browser compatibility and responsive cross-device performance.
- Architected scalable Redux Toolkit state management solutions, reducing duplicate API requests by approximately 40% and improving application efficiency.
- Improved frontend performance by 30–35% through code splitting, lazy loading, memoization, and optimized rendering strategies, directly improving Core Web Vitals (LCP, CLS, FID).
- Built a reusable React component library used across 3+ products, accelerating feature development by 25% while maintaining UI consistency and scalability.
- Implemented secure authentication and authorization flows using NextAuth, Keycloak, and JWT-based RBAC across multi-tenant applications.
- Refactored legacy JavaScript codebases into modern ES6+/TypeScript patterns, improving maintainability and reducing production regressions.
- Integrated RESTful APIs with proper authentication, loading state management, error boundaries, and graceful degradation.
- Collaborated with backend developers, UI/UX designers, and product owners in Agile/Scrum sprints; participated in code reviews to uphold engineering standards.

- Applied intermediate-level backend knowledge (Node.js, Express.js, NestJS, MongoDB, PostgreSQL) to collaborate on API design, debug integration issues, and contribute to full-stack discussions.
- Monitored and debugged UI and performance issues using Chrome DevTools and React Developer Tools, resolving critical issues pre-release.

PROJECTS

Multi-Tenant Venue Booking Platform

- Built a multi-tenant SaaS venue booking platform with end-to-end booking, cancellation, and automated refund workflows, including time-slot based bookings with cron-managed expirations.
- Developed the frontend with React.js and Redux Toolkit/RTK Query, featuring role-based dashboards and admin panels for granular access control per tenant and user role.
- Built a scalable NestJS backend using PostgreSQL and TypeORM, with Redis Bull Queues for efficient async processing and RBAC for admin/user permission control.
- Integrated Tap Payment gateway (frontend and backend) for secure transactions, Firebase Cloud Messaging for real-time notifications, and WATI, Odoo, and BMS SMS API for WhatsApp, business ops, and OTP verification.

Technologies: React.js, Redux Toolkit, RTK Query, NestJS, TypeScript, PostgreSQL, TypeORM, Redis, Firebase, REST APIs, Tap Payment Gateway, WATI, Odoo

Home Services Booking Platform

- Developed a consumer-facing home services booking platform with real-time scheduling, transparent dynamic pricing, and location-aware service discovery using Google Maps API.
- Implemented multi-step booking workflows with map-based service area selection and address management.
- Integrated Ryft Payment gateway for PCI-compliant secure online transactions with full checkout flow.
- Optimized Next.js pages for SEO using server-side rendering (SSR), structured metadata, and Open Graph tags.

Technologies: Next.js, Tailwind CSS, REST APIs, Ryft Payment, Google Maps Integration

Fintech Admin Dashboard

- Developed a scalable fintech administrative dashboard using Next.js to manage users, transactions, accounts, and system configurations for a financial services platform.
- Implemented secure authentication and RBAC using NextAuth integrated with Keycloak, ensuring compliant access control across all admin modules.
- Designed and integrated multi-step KYC (Know Your Customer) workflows with structured validation, document upload, and approval processes.
- Built real-time analytics dashboards with dynamic data visualization charts for financial monitoring, reporting, and compliance auditing.

Technologies: Next.js, TypeScript, NextAuth, Keycloak, REST APIs, Data Visualization

EDUCATION

Bachelor of Engineering – Computer Engineering

Government Engineering College (GEC), Modasa | 2020 – 2024 | CGPA: 8.04 / 10

KEY ACHIEVEMENTS

- Reduced duplicate API calls by ~40% through strategic Redux Toolkit caching and state normalization across large-scale applications.
- Achieved 30–35% frontend performance improvement measured via Core Web Vitals, directly impacting user retention and SEO rankings.
- Delivered reusable component library that cut feature development time by 25% across multiple product teams.
